EE871

Digital CO_2 Probe for Demanding Applications

The E+E CO_2 probe EE871 is designed for use in harsh, demanding OEM applications. A multiple point CO_2 and temperature adjustment procedure leads to excellent CO_2 measurement accuracy over the entire temperature working range, ideal for use in agriculture or outdoors. EE871 incorporates the dual wavelength NDIR CO_2 sensor, which automatically compensates for ageing effects and is highly insensitive to pollution.

The IP65 enclosure and the replaceable PTFE filter offer excellent protection in harsh, polluted environment. The compact size, the M12 connector and the optional mounting flange allow for fast probe installation or replacement. With the optional radiation shield, EE871 can be also used outdoors.

The measured data range of up to 5 % CO_2 (50,000 ppm) is available on E2 digital interface and up to 1 % CO_2 (10.000 ppm) is available on Modbus RTU interface.

EE871

An optional kit facilitates easy configuration and adjustment of EE871. The measurement interval can be set according to the application requirements, by this the average current consumption can be reduced to 120 µA for battery-operated devices.

The measured values are saved as a 32Bit *float* value from 0x2D to 0x30. The factory setting for the Slave-ID is 246 as an *integer* 16Bit value. This ID can be customised in the register 0x00 (permitted values 1 - 247).

FLOAT (read register):

Coil / Register Numbers	Data-Addresses	Parameter name
30046	0x2D	CO_2 Response time = 60s
30048	0x2F	CO_2 Response time = 105s
